Delivered an LLM-powered platform into a customer’s own private cloud. Works with the customer’s technical teams and non-technical stakeholders. Metropolitan Police constable until September 2023.

Experience

- DevOps Engineer, ai71**04/2026 – Present
- Delivered a production-grade, LLM-powered platform end to end into a customer’s own private cloud as sole author of the deployment: Terraform, certificates, secrets, databases, storage, CI/CD and GitOps. Empty Kubernetes cluster to all 29 workloads in 3 days.
 - Took over the customer’s production platform two weeks before go-live: restores verified on every database, enterprise connectors, SAML sign-on (platform side), a load test cleared at 300 concurrent users. The customer has since signed off the implementation deliverables.
 - Led the DevOps side of daily calls with the customer’s technical teams and their hosting provider and the weekly customer call. Wrote the one-pager and deck the customer used as input to an infrastructure migration decision.
 - Kept the customer’s environment current after delivery: three months of upstream releases applied in one day, 92 tests passed and 0 failed.
 - Shipped an analytics service to a second customer’s production environment on Azure Kubernetes (14 nodes) and took its in-app analytics live.
 - Operate the development and staging Kubernetes (AKS) environments where multiple product squads build, push and test daily (staging: 160 vCPU, 828 GiB RAM). Built the support intake the engineering channel uses.
 - Root-caused a fleet-wide workflow-engine crashloop behind weeks of alerts and audited every environment for it; cut an upstream database migration projected at over 4 hours to 4.5 minutes.
 - Run the platform layer under LLM-powered applications: model-gateway integration, guardrail models, vector search. Cut the customer environment over to a new gateway version with zero downtime in about 50 minutes.
 - Built the team’s AI-assisted engineering workflows; the head of the team has since declared the AI-assisted workflow the team’s strategy. Wrote the team’s MLOps guide, reviewed by the MLOps lead, and gave a talk to senior non-technical stakeholders.
- Self-directed Training and Portfolio**09/2024 – 04/2026
- Built a homelab Kubernetes cluster and portfolio builds across AWS, Azure and GCP covering zero-trust patterns, supply-chain security and observability: noahfrost.co.uk
 - DevSecOps bootcamp, September to November 2024.
- Police Constable, Metropolitan Police**02/2022 – 09/2023 | London, UK
- Wrote reports to the evidential standard for prosecution.
 - Made time-critical decisions with incomplete information at active incidents.

Certifications

- CompTIA Security+ 
- AWS Certified Cloud Practitioner 
- HashiCorp Certified: Terraform Associate 

Skills

- Delivery:** Kubernetes, Helm, Argo CD, GitOps, GitLab CI/CD, GitHub Actions, CI/CD, Docker
- Infrastructure and cloud:** Terraform, Infrastructure as Code, Microsoft Azure, AWS, Google Cloud Platform, HashiCorp Vault, Linux, Bash
- Platform:** LiteLLM, Weaviate, Qdrant, PostgreSQL, Hatchet, Zitadel, MinIO, Superset, SigNoz, Prometheus, Grafana

Education

- Law (Criminal Justice) LLM, Northumbria University**09/2023 – 2024
- Criminology BSc (Hons), University of Chester**09/2016 – 09/2020
