Ask is ai71's enterprise AI assistant platform, deployed in ai71's sovereign Azure or a client-mandated private cloud. The hosting provider runs the cluster, network and storage; ai71 owns everything above it: platform add-ons, admission policy, namespaces and quotas, configuration and releases. I own a federal government client's staging on its private cloud, was its sole DevOps engineer through go-live, and run ai71's Azure environments where about forty engineers in six squads build and test every release before clients take it.

Experience

DevOps Engineer, ai71 04/2026 – Present

Client environments

- Took over the client's production two weeks before go-live, identified the critical readiness gaps and closed them in 12 days: 9 of 9 databases restore-verified, four connectors into the client's own systems deployed, 300 concurrent users load-tested; spoke for DevOps on daily calls with the client and their hosting provider. It went live on the planned date and the client signed off the implementation.
- Built the client's staging as sole author, Terraform bootstrap of Argo CD then GitOps: the four application services with their Postgres clusters, vector store, object storage, workflow engine, identity and observability, 29 workloads on a bare 11-node Kubernetes cluster in 3 days and the full product passing end to end in 13; the client tests there before production.
- On a production upload incident, went from report to validated fix in under 24 hours, inside the client's change window: found in the source the bug capping ingestion in every deployment; the product team merged the fix 3.5 hours after the diagnosis, before a second client hit it.
- Same week: restored production document generation 57 minutes after the report; traced an upload outage to the hosting provider's object storage in 12 minutes, nothing rolled back.
- Fixed the client's staff single sign-on: read the cause from the identity provider's event store and changed one field, clearing a blocker on the client's staff rollout.
- Wired the client's staging and production into Sentry with Slack alerting, the first client deployment with full coverage; traced a production alert storm to a misrouted key and a dead metrics collector, fixed both, and stopped the failure events that were burning the company's error-tracking budget.
- On a second client's Azure production, deployed Superset through the control-cluster GitOps path and took in-app analytics live in one evening; in review of a production change there, found two security exposures, both fixed before release.

Internal platform

- Fixed CI/CD every Ask developer runs: digest-pinned base images in the shared GitLab templates, with Renovate raising updates as reviewed MRs; a GitHub API rate limit breaking image builds across 13 repositories, fixed the same day.
- Upgraded the shared staging workflow engine across 21 releases with a pre-change dump held as rollback: an upstream migration projected at over 4 hours cut to 4.5 minutes with a temporary index, and the database gap it exposed codified in Terraform; no outage in a client demo week.
- Root-caused a P0 staging outage on AWS EKS to a missing security-group rule, timed to the minute with six read-only CloudWatch and CloudTrail queries; fix moved into Terraform.
- Built the DevOps team's GitOps LLM-serving reference, three vLLM engines behind LiteLLM on one H100; chosen by the team council to build the team's AI-assisted deployment workflows, since made team strategy.

Self-directed Training and Portfolio 09/2024 – 04/2026

- Homelab Kubernetes cluster and portfolio builds on AWS, Azure and GCP: zero-trust, supply-chain security, observability (noahfrost.co.uk).

Police Constable, Metropolitan Police 02/2022 – 09/2023 | London, UK

Certifications

CompTIA Security+ **AWS Certified Cloud Practitioner** **HashiCorp Certified: Terraform Associate**

Skills

Delivery: Kubernetes (K8s) on AKS, EKS and private cloud, Helm, Argo CD (GitOps), Docker, Terraform, GitLab CI/CD

Infrastructure and systems: Microsoft Azure, AWS, on-premises, Linux, Bash, Python, SQL, DNS, TLS, Cloudflare Zero Trust, HashiCorp Vault, External Secrets Operator

Platform: PostgreSQL, SAML and OIDC SSO, Sentry, SigNoz, OpenTelemetry, LiteLLM, vLLM

Education

Law (Criminal Justice) LLM, Northumbria University 09/2023 – 09/2024

Criminology BSc (Hons), University of Chester 09/2016 – 09/2020
