Deploys and runs ai71's LLM platform for customers, including into a customer's own private cloud. Held sole DevOps responsibility for a customer's production platform twice: 12 days of go-live preparation, and an incident week during user acceptance testing.

Experience

DevOps Engineer, ai71 04/2026 – Present

- Took over a customer's production platform two weeks before go-live with no handover and ran it alone for 12 days: 9 of 9 databases from no backups to restore-verified; 300 concurrent users load-tested at 0.008% failures. The customer later signed off the implementation.
- Only DevOps engineer on a production upload incident, from report to validated fix in production the next day: found the bug capping every deployment at 3 parallel parses, shipped the fix with zero downtime; 300 MB uploaded, zero failures.
- Same week: restored production document generation 57 minutes after the report; traced an upload outage to the hosting provider's object storage in 12 minutes, nothing rolled back.
- Built a customer's staging environment on their private-cloud Kubernetes: bare 11-node cluster to 29 workloads in 3 days, from a 280-file single-author GitOps change.
- Found 8 defects in the product's application code from its source and live reads, and secrets being baked into a customer-bound image from its build pipeline; 2 fixed in the app team's next release, the rest open with them.
- Fixed staff single sign-on on a customer's production after 55 days of 0 successful logins: read the cause from the identity provider's event store, changed one field.
- Moved a customer's staging tenant into its own identity org in a 13-minute window, zero data loss: gated runbook, rollback rehearsal, 372 objects checked by SHA-256.
- Wrote the stress-test one-pager the customer used in a node-migration decision; spoke for DevOps on daily calls with the customer and their hosting provider.
- Upgraded a workflow engine across 21 releases with a 2.28 GB dump held as rollback, cutting an upstream migration projected at over 4 hours to 4.5 minutes with a temporary index.
- Deployed Superset on a second customer's 14-node production Azure Kubernetes cluster by GitOps; took its in-app analytics live in one evening.
- Chosen by the team council to build the team's AI-assisted deployment workflows, since made team strategy; wrote a 13-page MLOps guide for 14 engineers, reviewed by the MLOps lead.

Self-directed Training and Portfolio 09/2024 – 04/2026

- Homelab Kubernetes cluster and portfolio builds on AWS, Azure and GCP: zero-trust, supply-chain security, observability (noahfrost.co.uk).
- DevSecOps bootcamp, September to November 2024.

Police Constable, Metropolitan Police 02/2022 – 09/2023 | London, UK

- Wrote reports to the evidential standard for prosecution.
- Made time-critical decisions with incomplete information at active incidents.

Certifications

CompTIA Security+ **AWS Certified Cloud Practitioner**

HashiCorp Certified: Terraform Associate

Skills

Delivery: Kubernetes, Helm, Argo CD, GitOps, GitLab CI/CD, GitHub Actions, Docker

Infrastructure and cloud: Terraform, Azure (AKS), AWS, HashiCorp Vault, External Secrets, Linux, Bash

Platform: LiteLLM, vLLM, PostgreSQL, Hatchet, Zitadel (SAML), Weaviate, Qdrant, MinIO, Superset, SigNoz, Sentry

Education

Law (Criminal Justice) LLM, Northumbria University 09/2023 – 2024

Criminology BSc (Hons), University of Chester 09/2016 – 09/2020
